

Creating a safer place®

Performance Plus Strikes – superior strength for safer homes

Stronger screens are safer screens.

Locking points are vulnerable to burglary attack, as intruders use levers such as screwdrivers and jemmy bars to try and disconnect the lock from the door frame. The Australian Standards for security doors have identified the locking points as primary attack areas and include a Jemmy Test in the testing procedure for all security doors. To increase our sliding security door's resistance to a jemmy attack level beyond that of the

Australian Standards, we have partnered with the industry leading hardware manufacturer ASSA Abloy to uniquely create our own P+® (Performance Plus) strengthened sliding door strikes. P+® sliding door strikes are now included as standard with all Prowler Proof sliding security doors featuring Lockwood triple point locking, so homeowners receive superior value with industry leading security.

ANTI-JEMMY

The longer design is 2x the industry standard to help prevent lock attacks.

EXTRA SECURE

Installed using more screws, up to twice the industry standard.

MARINE GRADE

316 stainless steel for high performance and reduced ongoing maintenance.

Introducing P+®

Our many years of developing, manufacturing, and testing security screens have taught us a lot about the performance of security screens and how to improve them to a new industry level. At Prowler Proof, we understand the importance of security for homes and families, and we know homeowners want their security screens to perform to the highest level. That's why we've introduced Performance Plus (P+®).

The design methodology for our P+® solutions is to take industry standard hardware and components, and redesign them to a new level. That may include making them more tamper resistant, stronger, or more durable. Whatever is required to improve their performance above the industry standard. P+® is exclusive to Prowler Proof, and it's just another way we're Creating a Safer Place®.

welded security doors & window screens

P+[®]
Performance
Plus

- ▷

Resists jemmy between the lock face and door frame, as tested in Australian Standards 5040.
- ▷

Twice the number of fixing points on the centre strike (2 to 4) strengthens the holding capacity of the strike to the glass door frame.
- ▷

An extra fixing point on the top and bottom strikes (2 to 3). Strengthens the holding capacity of the strike to the glass door frame.
- ▷

316 marine grade stainless steel construction for reduced maintenance requirements after long periods of wear.
- ▷

Works with H.I.T.[®] receivers for the ultimate increase in safety.
- ▷

Standard with every Lockwood triple point sliding security door, leading the industry in safety.
