

Creating a safer place®

It's the finishing touches  
that make the difference

The difference between a good looking screen and a great looking screen can all come down to the installation.

These purpose designed extrusions create a seamless look for your new security door. The recessed fixing channels feature H.I.T.® - Hidden Installation

Technology making them tamper resistant, as it makes it harder to get pliers around screw heads. The channel also comes with a cover strip, hiding fasteners out of site. The receivers all include finger grips, making opening and closing of doors easier, particularly for the elderly and young children.

End caps complete the look, by closing the gaps that allow light or insects in. The sliding door interlocks have been tested to the Australian Standard

AS5039 and AS5040, and the receivers increase the strength of joined assemblies by up to six times that of existing installation methods.

**FINGER GRIP**  
Easy opening and closing with built in finger grips.

**END CAPS**  
End caps close gaps from both light and insects.

**COVER STRIPS**  
All fasteners are concealed with cover strips.

**MOHAIR**  
Receivers include mohair giving a soft close mechanism and they stop rattling noises.

# H.I.T.<sup>®</sup> Hidden Installation Technology

- ▷ Self locating and self aligning interlocks and receivers, for faster installation.
- ▷ Interlocks tested in their installation to AS5039 and AS5040.
- ▷ Suits Prowler Proof ForceField and Protec security doors, fitted to most door systems.
- ▷ Available in 2100mm, 2500mm and custom cut lengths.
- ▷ Cover strips available in black, white and silver to complement screen colouring.
